No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                       ô
                                                                      This peptide fragment represents a human influenza virus haemagglutinin eptitope which is used to make monoclonal antibodies with an affinity constant of 108 M-1. Such antibodies are used for detecting and isolating native human influenza virus heemagglutinin (HA), modified HA or HA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a chimeric fusion protein of the invention. The specification describes a chimeric pIX protein having at least one adenoviral pIX domain and a non-native amino acid sequence. The non-native sequence is a ligand that binds to a substrate present on surface cells. The chimeric proteins are used for producing adenovirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The specification describes a method for isolating one or more genetic elements encoding a gene product with a desired activity. Expression of the genetic element results, directly or indirectly in the modification of an optical property of the encoded polypeptide. The method comprises compartmentalizing the genetic elements into microcapsules, expressing them to produce their respective gene products within the microcapsules, and sorting genetic elements which produce the gene product(s) with the desired activity. The method is used for isolating genetic elements which encode a gene product with a desired activity. This can be a catalytic, regulatory or binding activity. The present sequence represents a fusion of a flag epitope and influenza haemagglutinin. It was used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolation of genetic elements encoding a gene product with a desired activity is carried out in microcapsules where changes in optical activity are detected \dot{\,}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
Peptide encoded by amplification product encoding a FLAG-HA peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The present sequence is the Saccharomyces cerevisiae alpha mating factor receptor Ste2, which was used in the development of a method to prepare cells presenting on their surface a mutant G-protein coupled receptor (GPCR) binding a desired ligand which the natural receptor cannot. The method comprises generating replicable expression plasmids comprising a coding sequence for a GPCR mutated by one or more amino acids in its transmembrane and/or extracellular domains, and operatively linked expression control sequences, transforming host cells with the plasmids and contacting the cells with the plasmids and contacting the cells with the higand and isolating those which bind. GPCR are natural receptor proteins, i.e. membrane proteins that allow cells presenting mutant GPCR on their surfaces are useful as biosensors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             with potential applications in diagnostics and environmental and on-line process monitoring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric protein; fusion protein; FLICE like inhibitor protein; FLIP; Fas; TNF; apoptosis; caspase-8; ligand; T cell; thymocyte; tumour specific antigen; immune response; therapy, prophylaxis; diagnosis; HIV; human immunodeficiency syndrome; AIDS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB03963
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAA51738-44 were used to construct a chimeric rat PTH-1 receptor,
rether1 and control plasmids.
Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or
compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or
compounds of the structure or formula signaling functional domain
of parathyroid hormone (PTH); L is a linker molecule present n times
(where n is a positive integer 1-10 (preferably 4); B is a C-terminal
inding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34);
R_1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1
receptor sequence. The new compounds are used for treating mammalian
conditions characterized by decreases in bone mass, determining rates of
bone reformation, bone resorption and/or bone remodeling, treating
diseases and disorders associated with decreased tetherl activity,
increasing cAMP in a mammalian cell having PTH-1 receptors, or screening
for a peptide or non-peptide PTH (claimed). The new compound can be
administered by inhalation unlike the large native PTH or PTHrP which
avoids the need for regular injections to treat osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammallan conditions characterized by decreases in bone mass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               compound comprising an amino terminal signaling functional domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alpha mating factor receptor; Ste2; mutant; blosensor; diagnosis; G-protein coupled receptor; GPCR; environmental monitoring;
                                                                 PTH: parathyroid hormone; conjugate; bone mass; bone reformation; PTH-1 receptor; resorption; remodeling; tether1; osteoporosis.
                 Peptide E16853A1 for construction of rTether1 containing HA-tag.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                              anti-apoptotic polypeptide which inhibits apoptosis of lymphocytes in combination with a transport group is described. The transport group is capable of transport group is described. The transport group or fusion peptide across the cell membrane. The anti-apoptotic polypeptide is FLICE-like inhibitor protein (FLIP) which inhibits Fas and TWF mediated apoptosis by inhibiting binding of Caspase 8 to the Fas receptor complex, thus shutting off the downstream Fas signalling pathway. The chimeric group and fusion peptide are useful for inhibiting ligand-induced apoptosis by bringing them into contact with T cells. The chimeric group is useful for expanding T cells in vitro e.g. T cells specific for particular antigens such as tumour-specific antigen, for enhancing particular antigens such as tumour-specific antigen, for enhancing particular antigens such as tumour-specific antigen, for enhancing are useful for the apoptosis of chronically activated CD4<sup>+</sup> T cells in HIV infected pathents. The chimeric group is also useful for therapeutic, prophylactic or diagnosis of intracellular delivery of small molecules and conding such pash as anti-apoptotic polypeptides and nucleic acids encoding such as anti-apoptotic polypeptides and nucleic cused to amplify the FILP CDNA for subcloning into the XhoI-NcoI site of the pHA-TAT vector which contains the N-terminal protein contains the nucleic access the subclosure and such as an approximant and such as an access to the pHA-TAT vector which contains the N-terminal protein access to the phase of the phase o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó

The invention relates to a novel fusion molecule comprising at least one protein transduction domain (PTD) and at least one linked molecule, where the linked molecule has therapeutic or prophylactic activity against a medical condition. The invention also relates to methods of drug discovery in which the test compound is linked to a suitable comprising protein and introduced to a cell; a method of killing resistant microorganisms using a suitable fusion molecule, a mammal comprising a covalently linked fusion molecule; and a mammal adapted for experimental use in which at least one transduction molecule has been transduced into essentially all the cells of the mammal. The fusion molecule is used to deliver a therapeutic agent to a mammal, the fusion molecule is used to deliver a therapeutic agent to a mammal. The fusion and exactiovascular frug, an antitumour drug, an anti-infective drug, a cardiovascular frug, an antitumour drug, cardiovascular drug, specially significant or prevention of a central or peripheral nervous system disorder. The central nervous system (CNS) disorder is especially Alsheimer's disease, Parkinson's disease, Huntington's disease, and also includes pre-senile dementia, epilepsy and selzures, computative behaviour, meningitis chementia, epilepsy and selzures, computative behaviour, meningitis cared to kill virally infected cells, especially those infected with HIV. The menory loss or Lou Gehring's disease, Pusion molecules can also be used to kill virally infected related prevent bacterial or viral infections. The methods are a highly effective means for transducing a molecule or systems within it. They also overcome bioavailability problems that a secondard with many theorems with many theorems beloavelled in the method or an analyse or system described with the secondard with many theorems with the delate of the secondard with many theorems with the delate of the secondard with the secondard with the second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   size,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               are associated with many therapeutic agents (e.g., large molecular si
hydrophobicity, hydrophilicity, biological resistance), by providing
efficient transduction of the transfer cell. The present sequence
represents a protein transduction domain used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
```

```
This peptide comprises a Flu epitope tagged scrambled peptide.

Murine 1071/2 Clone 8 cells were infected with pBabe puro

Fetrovirus constructs containing a sequence coding for the Flu

scrambled epitope or an inhibitor peptide (see AAW2917) identical

cother of region of protein Kinase C (PKA) isozymes. Control clone

cother of showed predominantly cytoplasmic and perinuclear staining,

while PMA induced cells showed translocation to the nucleus. Cells

infected with constructs coding for the scrambled peptide showed

similar staining. Those infected with constructs coding for

the C2 region showed predominantly cytoplasmic and perinuclear staining in both control and PMA induced cells. Novel outcomes can

cerening in both control and PMA induced cells. Novel outcomes can

cocur upon expression of peptides in cells. A claimed method of

screening for transdominant intracellular bloactive agents (A) able

co alter the phenotype of a cell comprises: (a) introducing a

library of different randomised nucleic acids (I) into cells; and

(B) screening the cells for altered phenotype due to presence of

(A). Also new are: (I) a library of retroviruses containing

different randomised (I); and (2) a library of mammalian cells

containing the library of (1), preferably integrated into the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Intracellular transdominant bioactive agent; screening; cell phenotype; effector peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening for transdominant intracellular active agents able to alter cell phenotype - useful for examining for changed phenotype, particularly to identify potential drugs with e. g. antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Transdominant effector peptide associated screening peptide #49

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a scrambled flu-epitope peptide, and can be used in the method of the invention. The method is for screening for transdominant bloactive agents (A) able to alter the phenotype of a comprises: (a) introducing a library of different randomised nucleic acids (I) into cells; and (b) screening the cells for altered phenotype due to presence of (A). (A) are potential pharmaceuticals, from their effect on signalling pathways. A particular application is to identify peptides, encoded by (I), that have antitumour activity or are able to increase sensitivity to, or reduce toxicity of, known antitumour agents. More generally the method can identify agents for treatment of many other conditions, e.g. cardiovascular diseases, anglogenesis, atherosclerosis, obesity, neurodegeneration, bone disease, viral and other infections,
                                                                                                                                                Transdominant bloactive agent; phenotype alteration; signalling pathway; antitumour agent; cardiovascular disease; angiogenesis; atherosclerosis; obesity; neurodegeneration; bone disease; infection; allergy; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Screening for trans-dominant active agents able to alter cell phenotype - useful to identify potential drugs with e. g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Transdominant intracellular effector peptide; RNA; screening;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel in vitro screening methods (I) for a transdominant intracellular bioactive agent capable of altering the phenotype of a cell. (I) comprises: (a) introducing a molecular library of randomized candidate nucleic acids into several cells; and (b) screening the cells for a cell exhibiting an altered phenotype, where the altered phenotype is due to the presence of a transdominant bloactive agent. The methods are particularly useful for screening intracellular transdominant effector peptides and RNA molecules selected inside living cells from randomized pools. (I) is also useful for introducing random libraries into cells to screen for bloactive compounds. The methods allow capid and highly efficient screening of large numbers of random loligoucleocities and their corresponding expression products in a single step. In addition, the methods allow screening in the absence of significant prior characterization of the cellular defect.
                                                                                                                                                                                                                                                                                    Methods for screening intracellular transdominant effector peptides and RNA molecules comprise delivering random oligonucleotides to cells, which are then screened for an altered phenotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Short-shafted adenoviral fibre; ssAF; penton base; cystic fibrosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .;

The present peptide sequence is incorporated into an adenoviral fiber.

The fiber protein and its penton base are used by the adenovirus to

The fiber protein and its penton base are used by the adenovirus to

infect a cell. The invention claims for a transfer vector which contains

bland and an be modified by incorporating sequences for a ligand to a

cell surface receptor or sequences that allow binding to a bispecific

antibody. Bispecific antibodies raised against the present peptide

cell surface receptor or sequences that allow binding to a bispecific

antibody. Bispecific antibodies raised against the present peptide

collows one end of the antibody molecule to bind to the fiber and the

cother end to bind specifically to a cell surface receptor. Therefore

this method enables targeting of the adenovirus to a desired cell-surface

cother by the introduction of a non-native amino acid sequence either

into the penton base or the fibre knob. The non-native amino acid

sequence can be such that it enables direct or indirect binding, e.g. by

consense of a bispecific or multispecific binding agent, of the adenovirus

to the desired cell-surface receptor. Using the a short shafted

adenovirus to attach to a cell and therefore effect entry into the cell

would reduce the level or efficiency of adenoviral penton base binding to

cell-surface receptor, thereby increasing the specificity of binding

to be useful for expressing therapeutic genes, for treating inherited

diseases such as cystic fibrosis or for inducing cell death in

consense and an end of the consense cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Integrin; cell surface receptor; penton base protein; adenovirus; binding site; binding domain; cell surface binding site; gene therapy; bispecific molecule; adenoviral transfer vector; pAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Haemagglutinin sequence of a chimeric adenovirus penton base protein.
Short-shafted adenoviral fibre constructs - used for producing products that facilitate entry into target cells, useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ch 81.2%; Score 65; DB 19; Length 25; I Similarity 100.0%; Pred. This invention describes a novel method for the selection of monoclonal antibodies (MAb) which comprises (1) fusing B lymphocytes with myeloma cells to produce antibody-producing hybridomas by an antibody-binding are presented at the surface of the hybridomas by an antibody-binding protein (I): and (II) binding the antibody to antigons (Ag). The invention also describes antibody-binding proteins (I) that comprise a combination of the signal peptide of a murine immunoglobulin (Ig) kappa chain or a murine MHC (major histocompatibility complex) Class I k(k) molecule; an antibody-binding site of proteins A, G, L or LG, and the transmembrane domain of PDGFR (platelet-derived growth factor receptor) or CD52. The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and selection can be made against many antigens in a library, optionally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Expression vector; antibody binding protein; monoclonal antibody; Neo-R; B lymphocyte; myeloma cell; hybridoma; protein G; bla protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Selecting monoclonal antibodies, by expressing them on the surface of hybridomas attached to antibody-binding protein, then reaction with
treating disorders characterised by inappropriate cell proliferation or cell death
                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                       A haemagglutinin (HA) tag peptide (AAR81452) was expressed as a fusion with amino acids 2-221 of apoptosis-associated protein Bcl-Y (see AAR81451) following PCR amplification (see AAT17378-79) of Bcl-Y CDNA and insertion into a CWV-based pcDNA1/amp vector derivative. The HA-Bcl-Y protein was produced in vitro and in transfected COS7 and NIH3T3 cells.
                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                  The present sequence represents a haemagglutinin sequence of a chimeric adenovirus penton base protein. The peptide is encoded by overlapping oligonucleotides. The penton base protein binds to cell surface receptors called integrins. The integrins not only provide a binding site for the adenovirus penton base protein, but also mediate cellular adhesion to the extracellular matrix molecules. The specification describes a method of introducing an adenovirus into a cell in vitro having a particular cell surface binding site. The adenovirus is contacted with a bispecific molecule comprising a component that selectively binds a binding domain of the penton base protein of the adenovirus and a second component that selectively binds the cell surface binding site. A complex of the adenovirus and the bispecific molecule is formed, and the cell is methods can be used for research and the vectors can be used for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used to treat or prevent a wide variety of cancers (e.g. of colon, breast or prostate, melanoma, glloma), alone or as adjunct to other therapies; autoimmune diseases (e.g. rheumatoid arthritis, psoriasis, multiple sclerosis, systemic lupus erythematosus, type I diabetes, allergy) or viral, bacterial or parasitic infections (e.g. human immune deficiency virus, Helicobacter pylori, Porphyromonas glingivalis, or Candida abbicans). A panel of cells (or cell lines) each genetically modified to express different antigens can be maintained as a repository,
on the basis of strength of affinity for a particular antigen. Complex mixtures of hybridomas can be used for selection, reducing the time and cost involved in MAD selection. This sequence represents the protein G contained in the expression vector pSEX11G2 which contains the protein G, Neo-R and the bla protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention relates to a vaccine comprising a cell having a membrane-bound fusion protein (FP) consisting of a non-antibody immunomodulator (I) linked to a heterologous membrane attachment domain. The vaccines are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GM-CSF; granulocyte macrophage colony stimulating factor; vaccine; membrane-bound fusion protein; non-antibody immunomodulator; infection; membrane attachment domain; cancer; autoimmune disease; therapy.
                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Vaccine having a membrane-bound fusion protein - comprising an Immunomodulator and heterologous membrane attachment domain useful for modulation of immune response against a disease-associated

Sequence 13, Application US/08990140A

Patent No. 6093795

GENERAL INFORMATION:
APPLICANT: Olsen, Henrik S.
APPLICANT: Sonenberg, Nahum
APPLICANT: Sonenberg, Nahum
TITLE OF INVENTION: Human Prt1-11ke Subunit Protein (hPrt1) and Human
TITLE OF INVENTION: elf4GF-11ke Protein (p97) Genes
FILE REFERENCE: 1488.0700001
CURRENT APPLICATION NUMBER: US/08/990,140A

CURRENT APPLICATION NUMBER: US 60/033,151
EARLIER FILING DATE: 1996-12-13
NUMBER OF SEQ ID NOS: 13

SOFTWARE: Patentin Ver. 2.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 6, Application US/08282951
Patent No. 5665590
GENERAL INFORMATION:
APPLICANT: YANG, ZHI
TITLE OF INVENTION: METHOD FOR ISOLATING AND DIRECTLY
TITLE OF INVENTION: CLONING GENES WHICH ENCODE CELL-SURFACE AND SECRETED
TITLE OF INVENTION: PROTEINS
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 60.5; DB 1; Length 102;

Sequence 52, Application US/09169015
Patent No. 6180343
GENERAL INFORMATION:
APPLICANT: Anderson, David
APPLICANT: Bogenberger, Jakob M.
TITLE OF INVENTION: Green Fluorescent Protein Fusions with Random Peptides
FILE REFERENCE: A6600/Dab/RmS/SJR
CURRENT FILING DATE: 1998-10-08
NUMBER OF SEQ ID NOS: 55
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 52
LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ; OTHER INFORMATION: Description of Artificial Sequence: synthetic

Patent No. 6306649
GENERAL INFORMATION:
APPLICANT: GILMAN, Michael Z.
APPLICANT: NATESAN, Sridaran
TITLE OF INVENTION: USE OF HETEROLOGOUS TRANSCRIPTION
TITLE OF INVENTION: FACTORS IN GENE THERAPY
NUMBER OF SEQUENCES: 72
                           FILING DATE: 10-MAR-1999
CLASSIFICATION: 435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 08/390,874
FILING DATE: 17-FEB-1995
ATTORNEY-AGENT INFORMATION:
NAME: DOW, Karen B.
REGISTRATION NUMBER: 29,684
REGISTRATION NUMBER: 29,684
REFERENCE/DOCKET NUMBER: 02307K-057010US
TELECOMMUNICATION INFORMATION:

-1- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO ECLL RESPERPORS AND FOR INITIATING INFECTION.

-1- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAI AND HA2) LINKED BY A DISULFIDE BOND.

-1- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
